# Organic Photochemistry and Pericyclic Reactions 

## Answers

1. Find out the major product \& provide mechanism?
a)

Mechanism:

b)

Mechanism:

c)

Mechanism:

d)

Mechanism:

2. Give mechanism for the given transformation.
a)

b)

d)

3. Complete the following reaction \& give their mechanism?

a)

Hint: Mechanism involves Peterno Buchi reaction followed by oxetane ring opening

b)

Mechanism:

Mechanism:

d)

4. Write the possible mechanism for the following photochemical transformation.
a)

b)

c)

d)

5. Write the major product.

Hint: These examples follow Photo intramolecular cycloaddition
a)

c)

6. Write the major product \& provide mechanism
a. Hint: Alkyl Aryl thiones having $\delta \mathrm{CH}$ bond undergo intramolecular H abstraction
a)

b. Hint: Aromatic thiones with vacant peri - position undergo reductive cyclization
b)

7. Find out the products in the following transformation.

b)

D
c)

8) Suggest mechanism for the following transformation.

Hint: Rosebengal generates singlet oxygen

9. Predict the major product.
a.

b.

c.

d.

10. Complete the given reaction and give the mechanism.

Hint: Di- $\pi$ methane rearrangment

Fromation of bond between C3 and C1

b.

c.

d. Hint: Oxa Di- $\pi$ Methane rearrangement
d.

11. Write all the four products obtained in the given reaction

12. Find out the product A and B in the given transformation and explain the difference in the photoreaction
a.

A

Hint: In the case of cis transformation i.e. 'a' $\gamma-\mathrm{H}$ abstraction is possible where as in trans it is not possible (not spatially close)

13. Find out the product missing in the given transformation

14. Predict the major product for the given transformation
a.

Hint: $\mathrm{N}_{2}$ extrusion occurs upon irradiation of pyrazolines
b.

C.

Hint: Photo Wolff rearrangement: Singlet carbene formed by loss of $\mathrm{N}_{2}$ is stabilised by rearrangement to ketene.
15. Predict the product of the following transformations
a.

b.

C.

16. Find the intermediates formed during the following transformation

17. Predict the stereochemistry of the following pericyclic reaction
a.

b.

18. Predict the structure of ' $A$ ' and ' $B$ ' in the given transformation.

19. Predict the product
a.

Hint: Cope rearrangement
b.

c.

d.

20. Predict the product.
a.

b.

c.

21. Write the product and give their mechanism.
a.

b.

c.

d.

22. Write the major product

Hint: Diels Alder reaction

b.

c.

23. Find out the $A$ and $B$ in the following transformation.

Intramolecular Diels Alder

24. Find out A and B in the following transformation.

25. Find out the A and B in the following transformation.

26. Find out the intermediates.

Hint: Benzyne is produced by diazotisation of anthranalic acid

27. Find out the product.
a.

b.

C.

d.

28. Find out the product.

1, 3- Dipolr species having dipolariphilic part

C. $\mathrm{OHC}-\mathrm{C}_{6} \mathrm{H}_{5}$

29. Predict the product.

b.

30. Predict the major photoproduct.
a.

b.
