Air quality  
monitoring

● Need for air  
quality  
monitoring

● Air quality :  
pollutants and  
standards

### Week 7 Assessment

The due date for submitting this assignment has passed.

As per our records you have not submitted this  
assignment.

**Due on 2019-03-20, 23:59 IS**

1) What is the purpose of simple linear regression?

1 point

- ☐ To predict scores on an independent variable from scores on a single dependent variable predict scores on an independent variable from scores on a single dependent variable.
- ☐ To assess whether there is a significant difference between independent groups.
- ☐ To predict scores on a dependent variable from scores on multiple independent variables.
- ☐ To predict scores on a dependent variable from scores on a single independent variable

No, the answer is incorrect.

Score: 0

Accepted Answers:

To predict scores on a dependent variable from scores on a single independent variable

2) The permissible concentration of PM2.5 in ambient air as set by WHO is 1 point

- ☐ Less than 10ug/m3
- ☐ Less than 40ug/m3
- ☐ Less than 15ug/m3
- ☐ Less than 30 ug/m3

No, the answer is incorrect.

Score: 0

Accepted Answers:

Less than 10ua/m3

Interaction Session

- ☐ Wear and tear of tyres
- ☐ All of these

No, the answer is incorrect.

Score: 0

Accepted Answers:

All of these

4) To measure 1000 ppm gas concentration using given circuit, 22.5mW is dissipated by 100 ohm  $R_{\text{heater}}$ . The output voltage  $V_0$  is measured as 3.33V for 1.8k ohm  $R_{\text{sensor}}$ . Find  $R_{\text{pot}}$  and  $R_{\text{serial}}$ .

- ☐  $R_{\text{serial}} = 333 \text{ ohm}$ ,  $R_{\text{pot}} = 3600 \text{ ohm}$
- ☐  $R_{\text{serial}} = 233 \text{ ohm}$ ,  $R_{\text{pot}} = 2780 \text{ ohm}$
- ☐  $R_{\text{serial}} = 133 \text{ ohm}$ ,  $R_{\text{pot}} = 2600 \text{ ohm}$
- ☐  $R_{\text{serial}} = 33 \text{ ohm}$ ,  $R_{\text{pot}} = 360 \text{ ohm}$

No, the answer is incorrect.

Score: 0

Accepted Answers:

$R_{\text{serial}} = 233 \text{ ohm}$ ,  $R_{\text{pot}} = 2780 \text{ ohm}$

5) In Linear Regression, what are considered as residuals ?

1 point

- ☐ Residuals are the difference between the observed and expected dependant variable values.
- ☐ Residuals are the independent values collected.
- ☐ Residuals are the confidence intervals.
- ☐ Residuals are the serendipitous findings.

No, the answer is incorrect.

Score: 0

Accepted Answers:

Residuals are the difference between the observed and expected dependant variable values.

6) Which of the following methods helps to best solve the

1 point

problem of calibration of gas sensor including correction for cross sensitivity?

- ☐ Simple linear regression
- ☐ Non- linear regression
- ☐ Logarithmic regression
- ☐ Artificial Neural Network

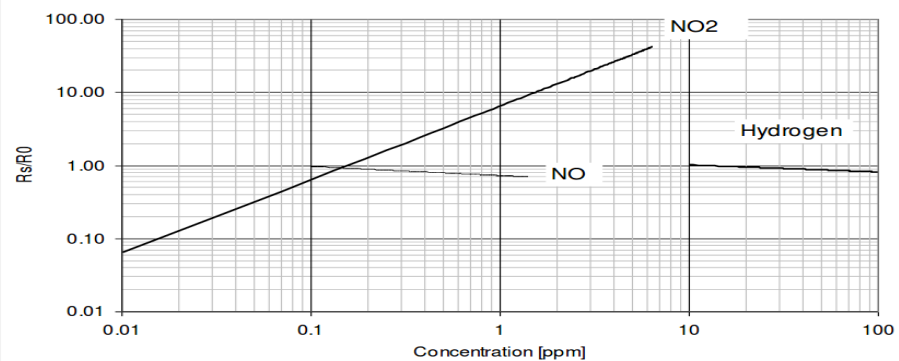

No, the answer is incorrect.

Score: 0

Accepted Answers:

Artificial Neural Network

7) Refer to the given linear log-log graph for NO<sub>2</sub> sensor MiCS-4514:

Find the behaviour equation for NO<sub>2</sub> sensor i.e ppm vs Rs/Ro without considering the effect of temperature and humidity on resistance values.

Use the following data for calculation.

$R_s/R_o = 6$  at 1 ppm.

$R_s/R_o = 0.6$  at 0.1 ppm.

Datasheet:

[https://www.sgxsensortech.com/content/uploads/2014/08/0278\\_Datasheet-MiCS-4514.pdf](https://www.sgxsensortech.com/content/uploads/2014/08/0278_Datasheet-MiCS-4514.pdf)

- ☐  $\text{ppm} = R_s/(R_o \cdot 6)$
- ☐  $\text{ppm} = R_s/(R_o \cdot 60)$
- ☐  $\text{ppm} = R_s/(R_o \cdot 0.6)$
- ☐  $\text{ppm} = R_s/(R_o \cdot 0.06)$

No, the answer is incorrect.

Score: 0

Accepted Answers:

$\text{ppm} = R_s/(R_o \cdot 6)$

8) Consider the NO<sub>2</sub> gas sensor MiCS-4514 behavior equation derived in Q7. It has  $R_o$  of 6000 ohm. The sensor resistance was found to be 6100 ohm in a polluted street. What is the concentration of NO<sub>2</sub> according to the equation derived? 1 point

- ☐ 170 ppb
- ☐ 600 ppb

- ☐ 240 ppb
- ☐ 24 ppb

No, the answer is incorrect.

Score: 0

Accepted Answers:

170 ppb

9) A diesel vehicle emits exhaust at an average rate of 15 litres per second. A PM sensor which measures PM10 in micro gram/m<sup>3</sup> is fitted to the tailpipe of the vehicle and data acquired from the exhaust is available in the dataset [https://drive.google.com/open?id=1epB\\_HSP7loSrTH9GwuPt-TIKg39RRo08](https://drive.google.com/open?id=1epB_HSP7loSrTH9GwuPt-TIKg39RRo08) in column **PM 10 ex**. The data is collected every 5 seconds. Assume that PM 10 values in the dataset are the average values over a 5 second interval. What is the total amount of PM10 in micrograms output by the vehicle after it starts moving from its stationary position?

- ☐ 4700micrograms - 4900 micrograms
- ☐ 190micrograms -210micrograms
- ☐ 4500micrograms - 4600micrograms
- ☐ 2900micrograms -3000 micrograms

No, the answer is incorrect.

Score: 0

Accepted Answers:

2900micrograms -3000 micrograms

10) PM10 particles are the particles whose size is

1 point

- ☐ More than 10nm
- ☐ Less than 10um
- ☐ Between 2.5 nm to 10nm
- ☐ Less than 10nm

No, the answer is incorrect.

Score: 0

Accepted Answers:

Less than 10um
