

5) Critiquing requires:

- Criticizing
- Developing further insights into the content being reviewed and opposing content by acknowledging both the strengths and weaknesses
- Challenging accepted wisdom and common knowledge

**Accepted Answers:**

*Developing further insights into the content being reviewed and opposing content by acknowledging both the strengths and weaknesses*

6) While presenting the results section of a study,

- One must explain the reasons for specific results
- One must not explain the reasons for specific results

**Accepted Answers:**

*One must not explain the reasons for specific results*

7) The section of the study that deals with an explanation of the findings in light of previous literature is:

- Results
- Discussion
- Conclusion

**Accepted Answers:**

*Discussion*

8) While presenting the discussion of results of a study,

- One must deal with each result individually.
- One must only deal with significant results or categorize similar results and deal with categories instead of individual results.

**Accepted Answers:**

*One must only deal with significant results or categorize similar results and deal with categories instead of individual results.*
