## Modeling and Simulation of Discrete Event Systems Solution of Assignment 6

Q1. Failure to recognize and deal with randomness in simulation output can lead to
(a) Serious errors
(b) Misinterpretation
(c) Bad decision
(d) All of above

Q2. The type of simulation for which there is no natural event $E$ to specify length of each run is known as
(a) Terminating
(b) Non terminating
(c) Steady state
(d) None of above

## Refer the following for Q3 and Q7.

Results of 10 independent replications of a bank model are presented as follows:

| Replicati <br> on | Number <br> served | Finish <br> time <br> (hours) | Average delay in <br> queue (minutes) | Average queue <br> length |
| :---: | ---: | ---: | ---: | ---: |
| 1 | 550 | 4.9 | 1.81 | 2.5 |
| 2 | 650 | 3.8 | 1.80 | 3.5 |
| 3 | 580 | 5.6 | 2.30 | 2.9 |
| 4 | 495 | 4.3 | 1.67 | 3.4 |
| 5 | 634 | 6.8 | 2.34 | 4.1 |
| 6 | 567 | 6.1 | 1.74 | 4.2 |
| 7 | 589 | 5.3 | 2.15 | 3.5 |
| 8 | 543 | 7.1 | 2.17 | 3.8 |
| 9 | 592 | 6.9 | 1.73 | 2.9 |
| 10 | 687 | 4.1 | 1.55 | 3.6 |

Q3. The approximate $90 \%$ confidence interval for the expected average queue length will be
(a) $[3.44 \pm 0.72]$
(b) $[3.44 \pm 0.31]$
(c) $[3.88 \pm 0.42]$
(d) $[3.88 \pm 0.31]$

Q4. The approximate $95 \%$ confidence interval for the expected average delay in queue(in minutes) will be
(a) $[1.92 \pm 0.20]$
(b) $[1.89 \pm 0.20]$
(c) $[1.92 \pm 0.38]$
(d) $[1.89 \pm 0.17]$

Q5. The approximate $95 \%$ confidence interval for the expected number of persons served will be
(a) $[577.8 \pm 60.58]$
(b) $[588.7 \pm 60.58]$
(c) $[588.7 \pm 40.17]$
(d) $[577.8 \pm 40.17]$

Q6. The approximate $97.5 \%$ confidence interval for the expected finish time (in hours) will be
(a) $[5.49 \pm 1.03]$
(b) $[5.49 \pm 0.28]$
(c) $[7.49 \pm 0.33]$
(d) $[7.49 \pm 0.17]$

Q7. The approximate $97.5 \%$ confidence interval for the expected average delay in queue(in minutes) will be
(a) $[1.92 \pm 0.62]$
(b) $[1.92 \pm 0.88]$
(c) $[1.92 \pm 0.24]$
(d) $[1.89 \pm 0.17]$

## Refer the following for Q8 to Q10.

Average total cost for two policies, $X_{1}$ and $X_{2}$ are to be compared, whose values are given for 5 independent replications. For knowing whether $\mu 1$ differs from $\mu 2$, confidence interval for the difference $\zeta=\mu 1-\mu 2$ is to be created using paired $t-$ approach.

| Replication | $\mathbf{X}_{\mathbf{1}}$ | $\mathbf{X}_{\mathbf{2}}$ |
| :---: | :---: | :---: |
| 1 | 127 | 118 |
| 2 | 124 | 120 |
| 3 | 127 | 122 |
| 4 | 123 | 123 |
| 5 | 127 | 119 |

Q8. The approximate $90 \%$ confidence interval for $\zeta$ will be
(a) $[5.2 \pm 5.39]$
(b) $[4.9 \pm 3.78]$
(c) $[4.9 \pm 5.67]$
(d) $[5.2 \pm 3.39]$

Q9. The approximate $98 \%$ confidence interval for $\zeta$ will be
(a) $[5.2 \pm 3.28]$
(b) $[5.2 \pm 5.97]$
(c) $[4.9 \pm 4.39]$
(d) $[4.9 \pm 6.74]$

Q10. The approximate $95 \%$ confidence interval for $\zeta$ will be
(a) $[5.2 \pm 5.39]$
(b) $[4.9 \pm 3.78]$
(c) $[4.9 \pm 5.67]$
(d) $[5.2 \pm 4.43]$

## Refer the following for Q11 to Q15.

For three different inventory systems, average total cost per month for five independent replications of each of the system are given below. Considering first system as the standard one, using paired-t approach construct two confidence intervals for the difference in the mean (i.e. for $\mu_{2}-\mu_{1}$ and $\mu_{3}-\mu_{1}$ ),

| Replication | $\mathbf{X}_{\mathbf{1}}$ | $\mathbf{X}_{\mathbf{2}}$ | $\mathbf{X}_{\mathbf{3}}$ |
| :---: | :---: | :---: | :---: |
| 1 | 127 | 118 | 121 |
| 2 | 124 | 120 | 129 |
| 3 | 127 | 122 | 121 |
| 4 | 123 | 123 | 124 |
| 5 | 127 | 119 | 127 |

Q11. The confidence interval for $\mu_{2}-\mu_{1}$ with overall confidence level of $90 \%$ will be
(a) $[-5.2 \pm 4.43]$
(b) $[-5.2 \pm 6.21]$
(c) $[-5.7 \pm 5.98]$
(d) $[5.2 \pm 3.75]$

Q12. The confidence interval for $\mu_{3}-\mu_{1}$ with overall confidence level of $98 \%$ will be
(a) $[1.7 \pm 1.21]$
(b) $[-1.2 \pm 9.80]$
(c) $[-1.2 \pm 7.11]$
(d) $[-1.2 \pm 8.58]$

Q13. The confidence interval for $\mu_{2}-\mu_{1}$ with overall confidence level of $98 \%$ will be
(a) $[-5.2 \pm 7.33]$
(b) $[-5.2 \pm 6.21]$
(c) $[-5.7 \pm 5.98]$
(d) $[5.2 \pm 3.75]$

Q14. The confidence interval for $\mu_{3}-\mu_{1}$ with overall confidence level of $90 \%$ will be
(a) $[1.7 \pm 1.21]$
(b) $[-1.2 \pm 0.29]$
(c) $[-1.2 \pm 7.11]$
(d) $[-1.2 \pm 5.92]$

Q15. Which of the following statement is correct among the following?
(a) System 2 differs from standard at overall confidence level of $90 \%$.
(b) System 3 differs from standard at overall confidence level of $90 \%$.
(c) System 2 differs from standard at overall confidence level of $98 \%$.
(d) System 3 differs from standard at overall confidence level of $98 \%$.

Percentage points of the Student's $t$ distribution with $v$ degrees of freedom

| Approximate percentage of confidence |  |  |  |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $v$ | 90 | 95 | 97.5 | 99 | 99.5 | 99.75 | 99.9 | 99.95 | 99.975 | 99.99 | 99.995 |
| 1 | 3.08 | 6.31 | 12.71 | 31.82 | 63.66 | 127.32 | 318.31 | 636.62 | 1273.24 | 3183.10 | 6366.20 |
| 2 | 1.89 | 2.92 | 4.30 | 6.96 | 9.22 | 14.09 | 22.33 | 31.60 | 44.70 | 70.70 | 99.99 |
| 3 | 1.64 | 2.35 | 3.18 | 4.54 | 5.84 | 7.45 | 10.21 | 12.92 | 16.33 | 22.20 | 28.00 |
| 4 | 1.53 | 2.13 | 2.78 | 3.75 | 4.60 | 5.60 | 7.17 | 8.61 | 10.31 | 13.03 | 15.54 |
| 5 | 1.48 | 2.02 | 2.57 | 3.37 | 4.03 | 4.77 | 5.89 | 6.87 | 7.98 | 9.68 | 11.18 |
| 6 | 1.44 | 1.94 | 2.45 | 3.14 | 3.71 | 4.32 | 5.21 | 5.96 | 6.79 | 8.02 | 9.08 |
| 7 | 1.42 | 1.90 | 2.37 | 3.00 | 3.50 | 4.03 | 4.79 | 5.41 | 6.08 | 7.06 | 7.88 |
| 8 | 1.40 | 1.86 | 2.31 | 2.90 | 3.36 | 3.83 | 4.50 | 5.04 | 5.62 | 6.44 | 7.12 |
| 9 | 1.38 | 1.83 | 2.26 | 2.82 | 3.25 | 3.69 | 4.30 | 4.78 | 5.29 | 6.01 | 6.59 |
| 10 | 1.37 | 1.81 | 2.23 | 2.76 | 3.17 | 3.58 | 4.14 | 4.59 | 5.05 | 5.69 | 6.21 |
| 11 | 1.36 | 1.80 | 2.20 | 2.72 | 3.11 | 3.50 | 4.03 | 4.44 | 4.86 | 5.45 | 5.92 |
| 12 | 1.36 | 1.78 | 2.18 | 2.68 | 3.06 | 3.43 | 3.93 | 4.32 | 4.72 | 5.26 | 5.69 |

(Method of calculation of half length and confidence interval)
Calculations are done in following manner (for example, for average queue length):

- Average $\left(\mathrm{F}_{\text {average }}\right)=\operatorname{Sum}\left(\mathrm{F}_{1}\right.$ to $\left.\mathrm{F}_{10}\right) / 10=3.44$
- Sample variance $=\operatorname{Sum}\left(\left(\mathrm{F}_{\mathrm{i}}-\mathrm{F}_{\text {average }}\right) / 9\right)$ (For i from 1 to 10$)$
- Half length $=\mathrm{t}_{\mathrm{n}-1,1-\alpha / 2}$ * sqrt(sample variance/n) ( n is 10 in this example)
(For $90 \%$ confidence level, $1-\alpha=0.9$ i.e. $\alpha=0.1$, so $1-\alpha / 2=0.95$ and in the similar way, $\mathrm{t}_{\mathrm{n}-1,1-\alpha / 2}$ can be calculated for different confidence level values.
- Confidence interval $=$ average $\pm$ half length

Solutions for Q 8 to Q10:

| j | $\mathbf{X}_{1 \mathrm{j}}$ | $\mathbf{X}_{2 \mathrm{j}}$ | $\mathbf{Z}_{\mathbf{j}=\mathbf{X i j} \mathbf{- X} \mathbf{2} \mathbf{j}}$ |
| :---: | :---: | :---: | :---: |
| 1 | 127 | 118 | 9 |

| Half length 90\% |  |  |  | $\begin{aligned} & \hline 4.430591 \\ & \text { (Ans 11) } \end{aligned}$ | $\begin{aligned} & \hline 5.923423 \\ & \text { (Ans 14) } \end{aligned}$ |
| Half length 98\% (Overall confidence) | $\mathrm{t}_{4,0.995} *$ sqrt(sample variance/5) $=4.60 *$ sqrt ( sample variance/5) |  |  |  |  |
| Half length 98\% |  |  |  | $\begin{aligned} & \hline 7.331194 \\ & \text { (Ans 13) } \\ & \hline \end{aligned}$ | $\begin{array}{r} \hline 9.801347 \\ \text { (Ans 12) } \\ \hline \end{array}$ |

- Confidence interval $=$ average $\pm$ half length
(For 90\% overall confidence level, individual confidence level is to be maintained at $95 \%$, hence $1-\alpha / 2$ becomes equal to 0.975 and accordingly half-length is computed).

## Answer to Q15:

$\mathbf{9 0 \%}$ Confidence interval for $\mu_{2}-\mu_{1}:-5.2 \pm 4.43$ (does not contain 0 in the interval, hence differ from standard)
$98 \%$ Confidence interval for $\mu_{2}-\mu_{1}:-5.2 \pm 7.33$ (does contain 0 in the interval, hence do not differ from standard)
$90 \%$ Confidence interval for $\mu_{3}-\mu_{1}:-1.2 \pm 5.92$ (does contain 0 in the interval, hence do not differ from standard)
$98 \%$ Confidence interval for $\mu_{3}-\mu_{1}:-1.2 \pm 9.80$ (does contain 0 in the interval, hence do not differ from standard)
