## Definition of vector space

- Informally, a collection of vectors that can be added together and scaled by a scalar
- Vector space  $\mathbf{V}$  over field  $F$  defines two operations
  - Vector addition:  $\mathbf{V} \times \mathbf{V} \rightarrow \mathbf{V}$ , denoted as  $\mathbf{x} + \mathbf{y}$
  - Scalar multiplication:  $F \times \mathbf{V} \rightarrow \mathbf{V}$ , denoted as  $c\mathbf{x}$
- If scalars are real numbers, then  $\mathbf{V}$  is called a real vector space

## Definition of vector space

- Informally, a collection of vectors that can be added together and scaled by a scalar
- Vector space  $\mathbf{V}$  over field  $F$  defines two operations
  - Vector addition:  $\mathbf{V} \times \mathbf{V} \rightarrow \mathbf{V}$ , denoted as  $\mathbf{x} + \mathbf{y}$
  - Scalar multiplication:  $F \times \mathbf{V} \rightarrow \mathbf{V}$ , denoted as  $c\mathbf{x}$
- If scalars are real numbers, then  $\mathbf{V}$  is called a real vector space
- 8 properties of addition and multiplication operations:
  - Commutativity of vector addition:  $\mathbf{x} + \mathbf{y} = \mathbf{y} + \mathbf{x}$
  - Associativity of vector addition:  $(\mathbf{x} + \mathbf{y}) + \mathbf{z} = \mathbf{x} + (\mathbf{y} + \mathbf{z})$
  - Additive identity:  $\exists \mathbf{0}$  (zero vector), s.t.  $\forall \mathbf{x}, \mathbf{x} + \mathbf{0} = \mathbf{x}$
  - Additive inverse:  $\forall \mathbf{x}, \exists (-\mathbf{x})$ , s.t.  $\mathbf{x} + (-\mathbf{x}) = \mathbf{0}$
  - Multiplicative identity:  $\exists 1$  (multiplicative identity of  $F$ ), s.t.  $\forall \mathbf{x}, 1\mathbf{x} = \mathbf{x}$
  - Associativity of scalar multiplication:  $(c_1 c_2)\mathbf{x} = c_1(c_2\mathbf{x})$
  - Distributivity of scalar sums:  $(c_1 + c_2)\mathbf{x} = c_1\mathbf{x} + c_2\mathbf{x}$
  - Distributivity of vector sums:  $c(\mathbf{x} + \mathbf{y}) = c\mathbf{x} + c\mathbf{y}$

[Prev topic](#)[Next topic](#)[Prev page](#)[Next page](#)

## Examples

- $\mathcal{R}^n$
- $\mathcal{R}^\infty$
- $m \times n$  matrices
- Subspaces: Non-empty subset that is closed under the vector addition and the scalar multiplication operations

## Module 1: Basics and Background

## Lecture 5: Vector and Metric Spaces

[Prev topic](#)[Next topic](#)[Prev page](#)[Next page](#)

## Examples

- $\mathcal{R}^n$
- $\mathcal{R}^\infty$
- $m \times n$  matrices
- Subspaces: Non-empty subset that is closed under the vector addition and the scalar multiplication operations
- Are the following subspaces?
  - Zero vector:

## Dimensionality

- Assume there are  $k$  vectors  $\mathbf{v}_1, \dots, \mathbf{v}_k$
- What is their dimensionality?

## Module 1: Basics and Background

## Lecture 5: Vector and Metric Spaces

[Prev topic](#)[Next topic](#)[Prev page](#)[Next page](#)

## Dimensionality

- Assume there are  $k$  vectors  $\mathbf{v}_1, \dots, \mathbf{v}_k$
- What is their dimensionality?
- Vectors  $\mathbf{v}_1, \dots, \mathbf{v}_k$  are linearly independent iff the linear combination  $c_1 \mathbf{v}_1 + \dots + c_k \mathbf{v}_k = \mathbf{0}$  only when  $c_1 = \dots = c_k = 0$

## Definition of metric space

- A set of elements  $\mathbf{M}$  with a distance function  $d : \mathbf{M} \times \mathbf{M} \rightarrow \mathcal{R}$  defined between any two elements of the set
- 4 properties of  $d$ :
  - Non-negativity:  $\forall x, y, d(x, y) \geq 0$
  - Identity:  $\forall x, y, d(x, y) = 0 \iff x = y$
  - Symmetry:  $\forall x, y, d(x, y) = d(y, x)$
  - Triangular inequality:  $\forall x, y, z, d(x, y) + d(y, z) \geq d(x, z)$

## Definition of metric space

- A set of elements  $\mathbf{M}$  with a distance function  $d : \mathbf{M} \times \mathbf{M} \rightarrow \mathcal{R}$  defined between any two elements of the set
- 4 properties of  $d$ :
  - Non-negativity:  $\forall x, y, d(x, y) \geq 0$
  - Identity:  $\forall x, y, d(x, y) = 0 \iff x = y$
  - Symmetry:  $\forall x, y, d(x, y) = d(y, x)$
  - Triangular inequality:  $\forall x, y, z, d(x, y) + d(y, z) \geq d(x, z)$
- **Pseudometric space**: Condition 2 (identity) is relaxed
  - Example: Number of vertices and edges of a graph
- **Quasimetric space**: Condition 3 (symmetry) is relaxed
  - Example: Time to walk from plain A to hill B
- **Semimetric space**: Condition 4 (triangular inequality) is relaxed
  - Example: Air fares on certain routes
