

PRINCIPLES OF SIGNALS AND SYSTEMS

PROF. ADITYA K. JAGANNATHAM

Department of Electrical Engineering
IIT Kanpur

TYPE OF COURSE : Rerun | Core | UG

COURSE DURATION : 12 weeks (24 Jan' 22 - 15 Apr' 22)

EXAM DATE : 24 Apr 2022

PRE-REQUISITES : Basic knowledge of Integration, Differentiation, Complex Numbers

INTENDED AUDIENCE : Students in Electrical Engineering, Electronics and Communication Engineering, Practicing engineers, Technical and Non-technical managers of

telecomm companies, Students preparing for competitive exams with Signals and Systems subject

INDUSTRIES APPLICABLE TO : Most companies in Electronics, Communication and Signal Processing. Examples are Qualcomm, Broadcom, Intel, Sasken etc.

COURSE OUTLINE :

This course introduces the fundamental principles of signals and system analysis. These concepts form the building blocks of modern digital signal processing, communication and control systems. Hence, a sound understanding of these principles is necessary for all students of Electronics and Communication engineering (ECE), Electrical and Electronics Engineering (EEE), and Instrumentation Engineering (IE).

This course is suitable for all UG/PG students and practicing engineers/ managers who are looking to build a solid grasp of the fundamental concepts of signals and systems as well as students/ professionals preparing for their college/ university/ competitive exams.

ABOUT INSTRUCTOR :

Prof. Aditya K. Jagannatham received his Bachelors degree from the Indian Institute of Technology, Bombay and M.S. and Ph.D. degrees from the University of California, San Diego, U.S.A. From April 07 to May 09 he was employed as a senior wireless systems engineer at Qualcomm Inc., San Diego, California, where he worked on developing 3G UMTS/WCDMA/HSDPA mobile chipsets as part of the Qualcomm CDMA technologies division. His research interests are in the area of next-generation wireless communications and networking, sensor and ad-hoc networks, digital video processing for wireless systems, wireless 3G/4G cellular standards and CDMA/OFDM/MIMO wireless technologies.

COURSE PLAN :

Week 1: Introduction to Signals, Signal Classification, Continuous/ Discrete Time Signals

Week 2: Definition and Classification of Systems, Linear Time Invariant (LTI) Systems

Week 3: Properties of LTI Systems, Impulse Response, Convolution, Causality, Stability

Week 4: Impulse Response of Discrete Time Systems, Discrete Time Convolution, Difference Equations and Analysis

Week 5: Laplace Transform, Properties of Laplace Transform, Inverse Laplace Transform

Week 6: Introduction to z-Transform, Properties of z-Transform, Region of Convergence, Inverse z-Transform

Week 7: Introduction to Fourier Analysis, Fourier Series for Periodic Signals, Properties of Fourier Series

Week 8: Introduction to Fourier Transform, Properties of Fourier Transform, Frequency Response of Continuous Time Systems, Examples of Frequency Response

Week 9: Fourier Analysis of Discrete Signals, Discrete Time Fourier Transform (DTFT), Properties of DTFT, Examples of DTFT

Week 10: Frequency Response of Discrete Time Systems, Discrete Fourier Transform (DFT), Prop. of DFT, Examples of DFT

Week 11: IIR/ FIR Filters, Direct Form Realization, Cascade and Parallel Form Realization, Problem Solving

Week 12: Concept of State, State Space Analysis, State Space Representation of Continuous Time Systems, Solution of State Equations for Continuous Systems
